What's new: Cloud Automation with amazon.aws 6.0.0

Alina Buzachis

Trishna Guha Engineering Manager

New **amazon.aws** 6.0 release

New boto3/botocore Versioning

 The amazon.aws Collection has dropped support for botocore<1.25.0 and boto3<1.22.0. Most modules will continue to work with older versions of the AWS Software Development Kit (SDK), however, compatibility with older versions of the AWS SDK is not guaranteed and will not be tested.

New Python Support Policy

- On July 30, 2022, AWS <u>announced</u> that the AWS Command Line Interface (AWS CLI) v1 and AWS SDK for Python (boto3 and botocore), will no longer support Python 3.6.
- Support for Python less than 3.7 by this collection will be removed in release 7.0.0.

Code Quality and CI Improvement

We have adopted several linting and formatting tools that help enforce coding conventions and best practice, by ensuring that all code follows the same style and standards.

Several plugins have undergone refactoring make the code more efficient and maintainable.

We have also extended the coverage of unit tests to ensure that the code behaves as expected.

Move to GitHub actions for CI from Zuul.

Deprecated Features

boto3_profile alias for the **profile** option has been deprecated. Please use **profile** instead.

The amazon.aws.s3_object and amazon.aws.s3_object_info modules:

- Passing contemporarily dualstack and endpoint_url has been deprecated. The dualstack parameter is ignored when endpoint_url is passed.
- Support for passing values of overwrite other than always, never, different or last has been deprecated.
 Boolean values should be replaced by the strings always or never.

Removed Features

Removed Features

Module	Features Removed
ec2_vpc_endpoint_info	Support for the query parameter has been removed. The amazon.aws.ec2_vpc_endpoint_info module now only queries for endpoints. Services can be queried using the amazon.aws.ec2_vpc_endpoint_service_info module.
s3_object	Support for creating and deleting S3 buckets using the amazon.aws.s3_object module has been removed. S3 buckets can be created and deleted using the amazon.aws.s3_bucket module.

Renamings

Renamings

12

amazon.aws.aws_secret -> amazon.aws.secretsmanager_secret
amazon.aws.aws_ssm -> amazon.aws.ssm_parameter

Option	Renamed to
aws_profile	<pre>profile (aws_profile remains as an alias)</pre>
aws_access_key	access_key (aws_access_key remains as an alias)
aws_secret_key	<pre>secret_key (aws_secret_key remains as an alias)</pre>
aws_security_token	<pre>security_token (aws_security_token remains as an alias)</pre>

New Plugins

New Plugins

Module	Description
<pre>backup_restore_job_info</pre>	List detailed information about AWS Backup restore jobs initiated to restore a saved resource.
backup_vault	Manage AWS Backup vaults.
<pre>backup_vault_info</pre>	Get detailed information about an AWS Backup vault.
backup_plan	Manage AWS Backup plans.
backup_plan_info	Get detailed information about an AWS Backup Plan.
backup_selection	Manages AWS Backup selections.
<pre>backup_selection_info</pre>	Get detailed information about AWS Backup selections.
backup_tag	Manage tags on backup plan, backup vault, recovery point.
backup_tag_info	List tags on AWS Backup resources.
